

ABSTRACT OF DISCLOSURE

A paper-discharging apparatus used with an image-forming device provided with one or more paper-discharging rollers and one or more idle rollers includes a supporting plate installed in the paper-discharging port side of the body of the image-forming device, a supporting bracket rotatably supporting the one or more idle rollers, and a spacing adjustment unit allowing a spacing distance between the supporting bracket and the supporting plate to be variable in response to the shape deformation of the supporting plate. The spacing adjustment unit is provided with an elastic member to restrain a magnitude of a contact pressure generated between the paper-discharging roller and the idler roller from being changed even if a shape of the supporting plate is deformed.
